⊜ SUMMARY

- Worked successfully in high pressure environments by adapting to changing situations, communicating effectively with co-workers and multitasking when necessary.
- Experienced in addressing technical problems in order to meet high-quality standards and tight deadlines while developing software products.
- Strong understanding of object-oriented programming, design principles and software patterns.

🎓 EDUCATION

Software Developer Diploma | Manitoba Institute of Trades and Technology
JANUARY 2019 – FEBRUARY 2020
Electronics and Embedded System Development | Fanshawe College
MAY-2018- JANUARY 2019

💼 EXPERIENCE

MITT
JANUARY 2019-FEBRUARY 2020

- Practiced Object-oriented programming using JavaScript and C#, implemented OOP in various projects.
- Worked with ASP.NET which includes ASP.NET validation, managing states, data grids, server-side controls, ADO.NET and error handling.
- Implemented both server side and client-side validation in project using C# and JS respectively.
- Learned RDMS (SQL) concepts like different data types, CRUD operations, joins on table and stored procedure.
- Hosted web projects using different platform like Azure, netlify and GitHub. Demo links are available in project section.

• PROJECTS

My-Reads: A book management. a React SPA App.
Technologies: HTML, CSS, React, JavaScript, Restful-API.
Tools: Visual studio code, VCS Git.
Demo Link: https://myreadsreactapp.netlify.com/
GitHub Link: https://github.com/IamAbhii/My-Reads-Single-page-Application
Description:
- In this project, the Main page shows 3 shelves for books that are Want to read, continue reading and already read which indicates the current status of the book. User can change the status of any book, among bookshelves.
- This application also uses API calls to search books from the database.
- This application gives multi-page application feeling by using react-routing

Movie Store: A movie renting store an ASP .Net App.
Technologies: C#, ASP .Net MVC, Entity Framework, jQuery, SQL, Bootstrap
Tools: Visual studio, VCS Git.
Demo Link: https://abhimoviestore.azurewebsites.net/
GitHub Link: https://github.com/IamAbhii/My-Video-Store
Description:
- This app allows customers to rent a movie. It keeps updating the database by each rent.
- In this app, the RDMS SQL server is used to keep track of rentals with the customer.
- This application uses different kinds of third-party libraries such as Type ahead, Elmah, Data tables, glimpse, and Auto Mapper.
- This project was done by client-side and server-side validation. It gives a Facebook login option as well for users convenient. This project includes user authentication as well.

Burger Builder: A Burger Store
Technologies: React, Firebase.
Tools: Visual studio code, VCS Git.
GitHub Link: https://github.com/IamAbhii/Burger-App-With-React.js
Demo Link: Project still in progress
Description:
- Created single page application where user can build burger dynamically and place orders.
- Orders stored in real-time NoSQL firebase database.
- Crated many reusable components like model and backdrop.

Arcade Game: A classic frogger game. A vanilla JavaScript project
Technologies: JavaScript, HTML, CSS
Tools: Visual studio code, VCS Git.
GitHub Link: https://github.com/IamAbhii/Arcade-game
Demo Link: https://iamabhii.github.io/Arcade-game/
Description:

- Practiced object-oriented programming using JavaScript, as an important programming paradigm that influences an application architecture and provides performance optimization.
- This project is made by using an existing open-source challenge platform which allowed me to develop the skill of reading the existing code base and modify it as required.

SKILLS

Web-technologies and languages:

- HTML, CSS/SCSS, JavaScript ES5, ES6, C#, SQL, C++

Technologies:

- VCS Git, AJAX with API, REACT, testing framework Jasmine, MVC5 ASP.Net, LINQ, jQuery, Web service, RESTful API

3rd party libraries:

- Glide js, Math js, Sweet Alert2, Bootstrap

Tools: Bash, Gulp, plugins: SASS, esLint, BrowserSync, autoprefixer, Babel

Concepts: Mobile first Design, Progressive Web Applications, Offline First Applications, service workers, Test Driven Development (TDD).
